This document explains the data files and programs used to generate results reported in paper, “The Effects of Emergency Government Cash Transfers on Beliefs and Behaviours During the COVID Pandemic: Evidence from Brazil”, by Fernanda Leite Lopez de Leon, Bansi Malde and Ben McQuillin.

We enclose the following programs (do) and data files (csv) used to perform the analysis in the paper. They are organized as follows:

- a. **MAINDATA_AE.csv** is a csv file containing the dataset
- b. **Tables_AE.do** is a do file. It transform the csv files to STATA *.dta file, creates subsamples and replicates the summary statistics, data used in the Figures and regression results reported in the main text and in the Appendix
